

## Picture a Story – digitally!

For those who are not artistic, or those who just love using their iPad or computer, why not consider creating a picture book digitally?

It will depend on what devices you, your school or the children in your book group have access to, and possibly how adept they are or how willing they are to explore a new way of doing things, but here are some ideas worth investigating.

**Book Creator** (iOS free version available allows 2 books to be made; paid version will allow more).

This app allows you to create a traditional children's picture book or a comic. You can add photos from a file or take them 'in the moment'; you can even take a photo of your own drawings or paintings to slot them into your book.

If you want to make a comic, this app gives you speech bubbles, thought bubbles and even classic 'POW!' type of inserts.

**Comic Life3** ( iOS £4.99 per apple id)

As above, you can create a professional-looking comic to tell your story.

**Comic Strip It!** (Android, free with advertisements, or pay to remove advertisements).

Works on tablets or phones.

**Strip Generator.com** web-based; use on any computer. Can only make one strip at a time.
